Payment orchestration at scale

Speaker

Nathan Salisbury

Managing Director Payment Orchestration, VP Indirect Sales Worldline

Rise

Payment orchestration at scale:

The disruptive force in enterprise payments.

Payment orchestration is here to disrupt.

It will revolutionize the payment acceptance landscape and shift control back to enterprise merchants, relegating legacy PSP's to commodity services.

Let's explore the past, present and challenge the future state of enterprise payment services at a global scale.

The early days...

Birth of e-commerce payment processing driven by web 2.0

Card schemes & Acquirers start supporting ecommerce specific transactions

Gateways & alternative payment methods emerge

High transaction costs

The early days...

PSP model expansion

Birth of e-commerce payment processing driven by web 2.0

Card schemes & Acquirers start supporting ecommerce specific transactions

Gateways & alternative payment methods emerge

High transaction costs

PSPs emerge with strong APIs to drive scale and simplicity

Major PSPs become acquirers

Merchant's select one or few providers for global payment needs

Enterprise merchants fine tune payments for performance and cost

Online processing costs decrease

The early days...

PSP model expansion

The orchestration age

Birth of e-commerce payment processing driven by web 2.0

Card schemes & Acquirers start supporting ecommerce specific transactions

Gateways & alternative payment methods emerge

High transaction costs

PSPs emerge with strong APIs to drive scale and simplicity

Major PSPs become acquirers

Merchant's select one or few providers for global payment needs

Enterprise merchants fine tune payments for performance and cost

Online processing costs decrease

Increasingly diverse global payment product landscape

Increasing regulatory and compliance requirements

Enterprise & scale-up merchants seek full control of payments stack

Merchant focus on reducing operational costs and faster speed to market

Provider agnostic payment orchestration platforms emerge

Introducing Worldline Payment Orchestration

Why would an enterprise merchant use payment orchestration?

Use case 1

Independent and flexible checkout for speed and control

Universal provider agnostic checkout

Improved UX and conversion

Reduce technical and operational costs

Use case 2

Outsource provider integrations and ongoing technical management

300+ providers

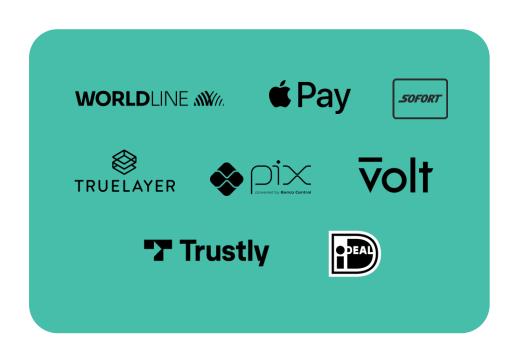

Speed-up geographic expansion into new markets

Best in class global provider integrations on-demand

Reduce costs for building and maintaining provider connections

Use case 3

Provider agnostic software for success-rate optimization

Powerful routing rules for auth–rate optimisation

Boost payment success rates for revenue recovery

Self-service portal for **total control** of transaction flows

Worldline Payment Orchestration

Payment management software to:

300+

Payment providers connected
