

Environmental commitment

All Worldline entities strive to satisfy customers' requirements, to comply to contractual commitments in the delivery of IT services, while reducing pollutions, its datacenters' impact and to seek continuous improvement of environment and people protection. Worldlines asks its suppliers and subcontractors to comply to environmental regulations.

Sustainability is a growing challenge for all companies and Worldline is strongly committed to this cause.

Worldline started deploying its ISO 14001 Environmental Management System in 2008 and keeps deploying it to all its datacenters and main locations.

Worldline sites are part of this approach. It reflects our commitment to:

- Reduce our activities' negative impact on environment;
- Reduce our pollution causes;
- Permanently increase our energy efficiency.
