

Integrating payment terminals made easy

TILL INTEGRATION MODULE

Till Integration Module (TIM) is the flexible interface from Worldline for quick and easy integration into your point of sale solution.

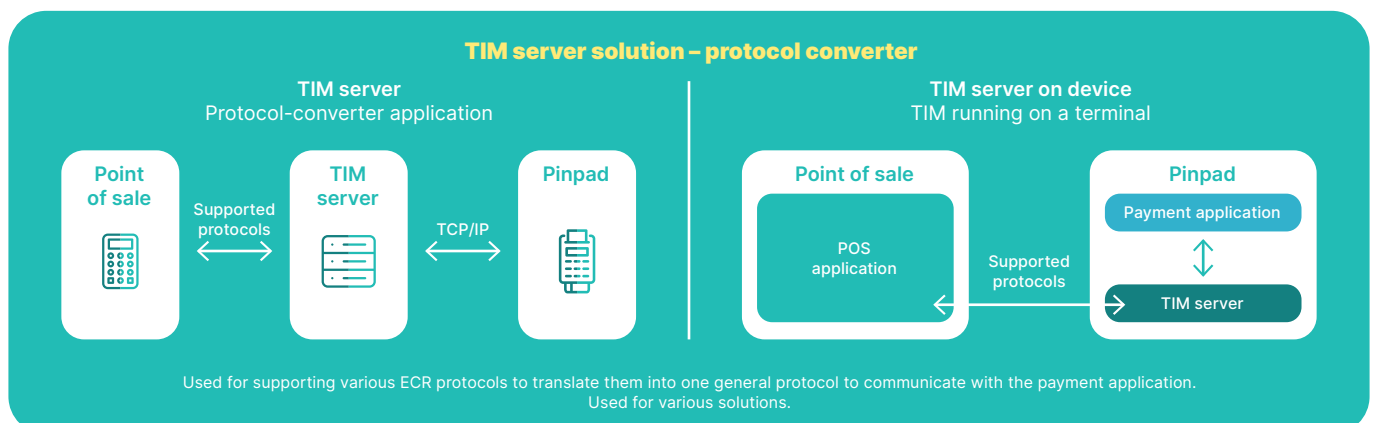

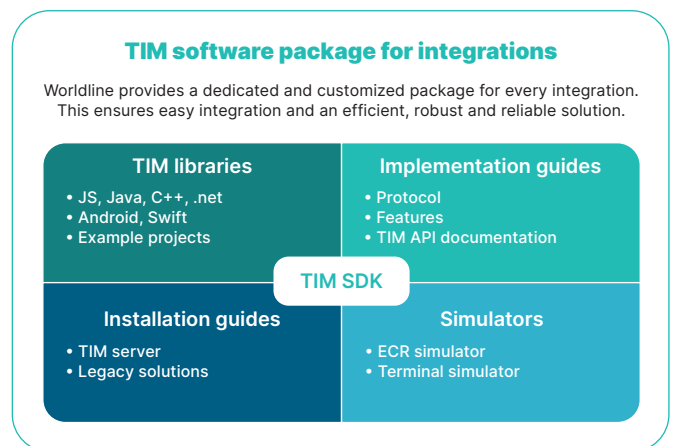

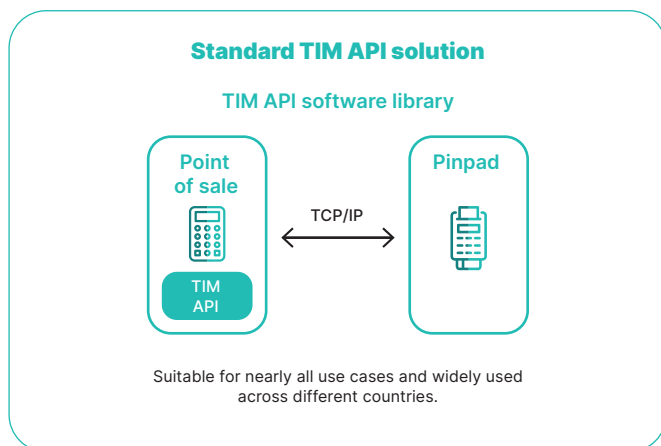

Integrating Till Integration Module is quite simple. This module enables seamless and automatic communication between your point of sale application or software and the ep2 payment terminals from Worldline. Till Integration Module gives you and your customers a free choice of the payment terminal you would like to integrate.

FULL SETUP SERVICE

If you opt for Till Integration Module, you will benefit from free developer support via telephone or e-mail. Worldline also offers on-site support from our specialists (charges apply). What's more, we support you in completing final acceptance by offering free type verification for your point of sale solution.

TILL INTEGRATION MODULE OFFERS YOU THE FOLLOWING BENEFITS:

- Secure, reliable transaction workflow
- Independent of operating systems
- Simple, understandable API
- Various development environments and programming languages are supported
- Modular technical architecture for any known payment procedure
- Can also be used in point of sale applications of mobile devices such as tablets or smartphones
- Optimum support for distributed cash register systems
- Suitable for omni-channel solutions
- Support from qualified integration experts at Worldline

The TIM API is available for various programming languages and sample projects. Various use cases and open ECR protocols are described. Worldline provides simulators or

test terminals for a quick start. For certain legacy solutions instructions and scripts for updates and installation are provided.

NUMEROUS PAYMENT TERMINALS SUPPORTED

Till Integration Module supports the ep2 payment terminal range from Worldline. The sole requirement is communication via Wifi or LAN. Some terminals also enable a connection via Bluetooth or USB.
